KINGCON[®] 2.0

Feed drawer brushes

The new generation: KINGCON® 2.0

Plastic on the outside, metal wire on the inside, tightly connected to a galvanized steel profile back. To this day, a unique system from Weber. The bristle density is higher than in any other comparable brush. The new generation with optimised bristle anchoring is even more durable than its predecessors!

Weber feed drawer brushes have been designed to withstand the extreme stress occurring during the production process. Our special material mixture, the comparatively high bristle density, the **improved fixation** as well as the number of bristle lines ensure a consistently high quality of the concrete blocks and a thorough cleaning of the stamp.

We offer three different types of brush holders which are attached to the feed drawer.

Features

- > Special material mixture with high bristle density
- > Improved fixation for extremely long service life
- > Outer bristles: nylon 2 x 3 mm blue / poly 1.2 mm red
- > Inner bristles: flat wire 1.1 x 0.25 mm
- > Bristle length: 115 and 85 mm (others on request)
