

**Livestock keeping
and livestock
convenience**

Down to earth

We have never lost touch and stayed on the ground - because we are deeply familiar with all kinds of floors and grounds. The development work of Weber Bürstensysteme is closely connected with modern road building and with the first road sweepers that were introduced as long as 120 years ago. It is this tradition and experience which our customers benefit from day in and day out.

Established in 1894, Weber Bürstensysteme today is a dynamic company with about 120 employees that is family-managed in the fourth generation. We use our two factories in Bad Camberg and Selters (Hesse) as well as our office in Schmöln (Thuringia) to develop, manufacture and market high-quality brushes which meet the demands of the most challenging applications while achieving OEM quality. Established machine manufacturers have been relying on our systems as original equipment for many years.

From street cleaning to livestock care - our deeply rooted comprehension of our customers' applications helps us to create a multitude of customized solutions.

The ideal mixture!

High quality raw materials are the basis for the quality and effectiveness of our brushes. For that reason we use certified suppliers only. While this is obligatory for us, the right recipe and preparation are “freestyle”.

We make sure that selection, combination and processing of materials are precisely adapted to individual requirements. For the sensible field of livestock care, we use soft bristles made of polyamide which are able to gently but effectively clean and massage the skin.

Weber Wellness for the Barn

Single-brush systems

This is the standard solution using one rotating brush. The soft, but at the same time also robust and durable brushes effectively remove parasites and dirt.

Twin-brush systems

The convenience package including one vertically rotating brush and one horizontally rotating brush offers a maximum contact surface. It takes just one run to massage the head, neck, shoulder, back and body while gently cleaning the skin.

Strips

This is a low-cost and space-saving version. Simple scratch brushes can be installed horizontally or vertically at any position in the barn. Weber offers such brushes in different material mixtures and lengths.

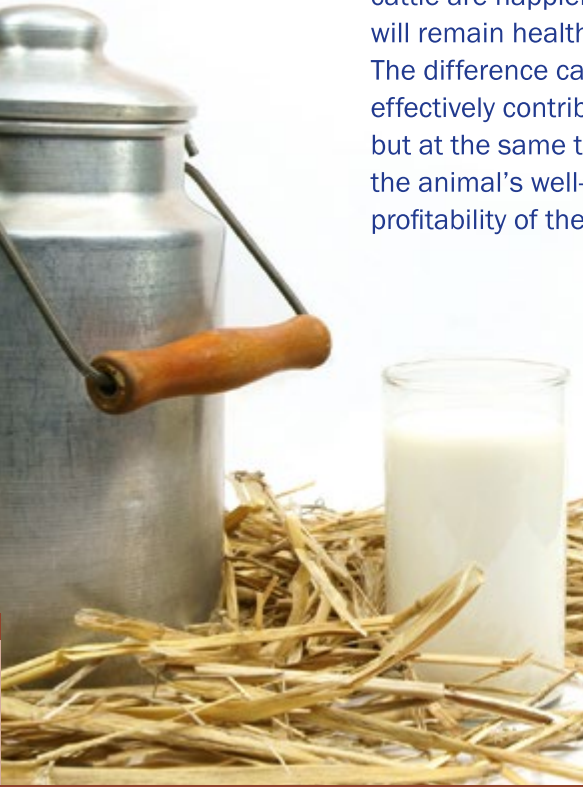

The benefits

- Soft bristle mixtures (polyamide)
- Fitted shapes
- Robust and resistant (resistance to chemical agents)
- Easy fitting
- Compatible with all common livestock cleaning machines

Effective stroking

It is a simple, yet scientifically confirmed equation: clean and relaxed cattle are happier cattle. And cattle that are feeling comfortable will remain healthy for a longer time while producing more milk. The difference can be as much as 10% per day. Brush massage effectively contributes to this effect. The cattle are more active, but at the same time more calm and balanced. In summary: the animal's well-being increases the yield and improves the profitability of the farmers.

Higher milk output: brushes increase the milk production by as much as ten percent per day.

EU Rules on Organic Farming

Livestock-friendly farming also includes the convenience in free-stall barns. According to the EU rules on organic farming, animals must be kept according to their biological and ethological requirements. This also includes facilities for the autonomous skin care and cleaning using cattle brushes.

5 reasons for cattle brushes

- **Increased milk production**
- **Gentle and effective skin care**
- **Reduced number of mastitis cases (swelling of udder)**
- **Increased yield**
- **Reduced number of casualties in and at the barns**

Quality on
all levels –
Weber[®]
Bürstensysteme
has been certified
according to
ISO 9001.

Production

Extruding. Drilling. Filling.

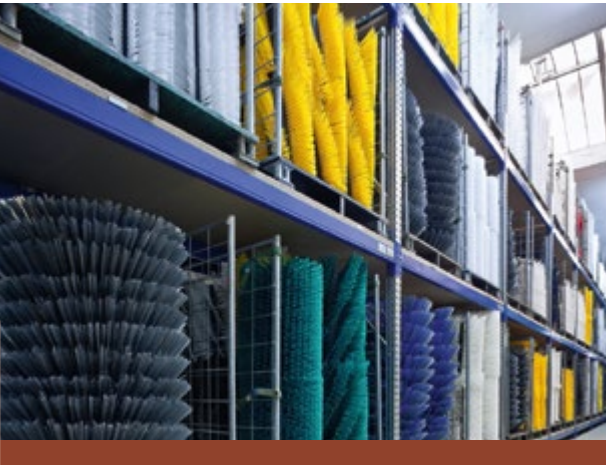

Weber Bürstensysteme is one of the leading manufacturers of technical brushes. One of our key benefits is our vertical integration. From brush body extrusion to filling and pinning machines and machine building – we are covering all steps of production in our own facilities in Bad Camberg and Schmöln. A quality management system and strict quality inspections on all levels are used to assure the constantly high quality of our brushes.

Logistic

Everything within reach!

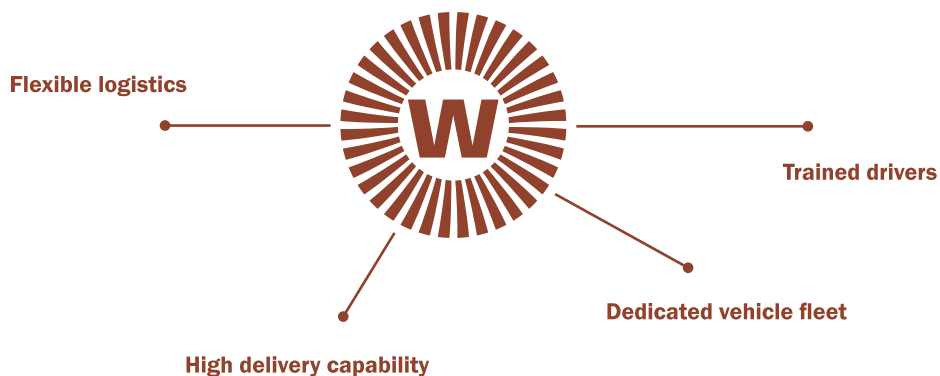

Downtimes cause financial losses. To make sure that you remain flexible, we have further upgraded our storage capacities in spring 2012. In Bad Camberg and in our new logistics center in Selters (Hesse), we have all common types of brushes and accessories readily available in our almost 4,000 m² storage facility. Just drop us a call and we will deliver the required standard article within 24 hours.

Service

Mobile know-how

Goal achieved? What may look like a completed order for us is only one single step. Delivery and qualified on-site service are important modules of our service program. We have our own vehicles for free warehouse delivery. And on top of that, our trained service drivers are the extended arm of our sales organization, supporting you on all technical questions that you may have.

Clean solutions for industrial, municipal and agricultural applications

For street cleaning, snow removal, pavement cleaning, livestock care or concrete block production, Weber Bürstensysteme offers a broad range of technical brushes. Our proven standard solutions are complemented by customized systems for all cleaning applications that we develop in cooperation with machine and vehicle manufacturers.
